

## Blob Overlay Menu

This extension implements an overlay menu that displays ellipse shaped menu items at a random position. The position of the items will be different each time the menu is opened. In addition, the menu items can also 'blob' in each other, like droplets of mercury on a surface. Also, known as the Goo-effect. Unlike most other menus (which use pixels), the sizes of this menu are in vmin units. This means that the sizes are relative to the size of the viewport. So, if the browser window is resized, then the menu will automatically scale.

### Columns

The expanded menu items are randomly positioned in an invisible grid. The position of the items will be different each item the menu is opened. Although, they will always be in their own grid cell, so the menu is still relatively easy to find. The 'columns' property specifies the number of columns in this grid.

### Enable Goo effect

Specifies whether the goo effect is enabled. The goo effect is a SVG filter which makes menu items blob into each other, like droplets of mercury on a surface. Note that in some browsers this may impact the performance of the menu.

### z-index

Specifies the z-index. This makes sure the menu is on top of all other elements on the page.

### Style

The main button and menu item have many styling options. Note that most sizes are in vmin units! This means that the sizes are relative to the size of the viewport. 1 vmin = relative to 1% of viewport's\* smaller dimension.

### Overlay

In addition to setting the overlay color and alpha value (transparency), it is also possible to use a 'blur' filter for the background.

### Animation

The menu supports several easing effects which controls the timing of the transitions. **Duration** sets the length of the animation. **Easing** sets the timing of the animation.
