

## Circle Menu

The Circle Menu displays an animated popup menu with the menu items displayed in a circle. When you click the trigger button then the hamburger icon will change into 'X' symbol and menu items will be animated one by one from the center of the button. The background color of each item is customizable.

**Icon size**

Specifies the size the hamburger icon in the trigger button.

**Start angle**

Specifies the start angle (in degrees) of menu items. The default is 200.

Note that if you change the alignment of the menu button then you most likely also want to update the angle. For example, when using left alignment, 160 degrees probably looks better.

**Alignment**

Specifies the alignment of the trigger button: left, center or right. The menu will always be displayed at the top.

**Extra offset**

The menu automatically calculates the offset from the top, based on the size of the trigger button. If you want the increase or decrease this offset then use 'Extra offset'. It can be a positive or negative value.

**Start scale**

Specifies the start scale of the menu circles. The default is 0.5, which is 50% of the final size.

**End scale**

The size of the expanded circles depends on the size of the trigger button.

You can use 'end scale' to fine-tune the size of the circles. The default is 1.0.

Examples: 1.1, 1.2, 2.0 etc.

**Style**

The Main and Sub buttons have different style properties.

**Text**

The 'text' property specifies the text of the main button. However, you can also use built-in hamburger animations. These animations are the same as in the Panel Menu. You can select the animations from the dropdown menu.

=	(transform)
_	(one bar)
@	(spinner)
*	(rotate)
	(90 degrees)
<	(arrow left)
>	(arrow right)
^	(arrow up)
v	(arrow down)
-	(minus)
+	(plus)
x	(times)

**Animation Duration**

Sets the length of the animation

**Animation Easing**

Sets the timing of the animation.

***How to install this extension so it is available in WYSIWYG Web Builder?***

You can use the Extension Manager (Menu->Tools->Extension Manager) to install this extension.

Alternatively, you can manually copy all files from the zip file to the Web Builder extensions folder. Usually this folder is in this location:

My Documents\WYSIWYG Web Builder\system\extensions\

***Requirements***

WYSIWYG Web Builder 12.2 or higher to support responsive font-size.

***License Agreement***
