

## Directory Tree File Listing

This extension for WYSIWYG Web Builder generates a listing of the contents of a specific directory on your web site. For example, if you have a directory on your web site with PDF or MP3 files then this extension will automatically scan this folder and display the contents on your web page as links in a tree-like format, so users can download these files. Levels can be expanded/collapsed by the user and the customizable icons.

### Key Features

- Display a list of the files in a directory on the server in a tree-like format.
- Only display specific file types.
- Plain JavaScript, no dependency on jQuery.
- Many other styling options.

Note that you must publish the page to view the results, because the extension uses PHP which only works on a web server.

Online Demo

**Folder to scan**

Specifies the folder on the web server to scan for the specified file types.

Use `.` to scan the current folder.

Make sure the folder exists on the web server!

**File types**

File types to show. Use a comma to separate multiple files types.

For example: ***jpg, mp3, pdf***

**Link Target**

Link target controls where the file will be displayed when the user follows a link. Most of the time, clicking on a link simply loads in the same window where the link was.

However, with Link Target, you can have the new document open in a new window, or if you are using frames, in another frame.

Examples:

**\_blank**: opens the link in a new window

**\_self**: open the link in the current frame

**\_parent**: open the link in the parent frame

**\_top**: loads the linked document in the topmost frame

**Expand tree**

Specifies whether all items in the tree are initially expanded.

## ***Style Properties***

Set style properties, like font family, size, colors etc.

### **Overflow**

This overflow can be used to control the overflow behavior of the menu.

- **Visible**  
The content of the menu is fully visible. No clipping will occur.
- **Hidden**  
The content is clipped, but the browser does not display a scroll-bar to see the rest of the content.
- **Scroll**  
The content is clipped, but the browser displays a scroll-bar to see the rest of the content.
- **Auto**  
If the content is clipped, the browser will display a scroll-bar to see the rest of the content.

### **Line height**

Specifies the line-height of the text. This creates extra spacing at the top and bottom of the text.

### **Sub level indent**

Specifies the indent for sub levels.

### **Text indent**

Specifies the spacing between the icon and the text

### **Padding**

Specifies the horizontal padding.

## ***Responsive Properties***

The font-size, padding, spacing, icon size and line-height are responsive, which means that they can have a different value in breakpoints.

## ***How to install this extension so it is available in WYSIWYG Web Builder?***

You can use the Extension Manager (Menu->Tools->Extension Manager) to install this extension.

Alternatively, you can manually copy all files from the zip file to the Web Builder extensions folder. Usually this folder is in this location:

My Documents\WYSIWYG Web Builder\system\extensions\

## ***Requirements***

WYSIWYG Web Builder 16 or higher to support responsive font-size
