

Download Button

This extension for WYSIWYG Web Builder implements a download button that tracks the number of downloads for a given file. This button will also display the current download count. All download count results are stored in the server-side text file, `downloadbutton_db.txt`. This file is typically created automatically, unless the folder permissions are not set correctly.

Please note that this extension uses PHP, but it is not necessary to set the page extension to PHP. The download count functionality works seamlessly in the background through AJAX, updating the results instantly without requiring a page refresh.

Text

Specifies the text of the button.

Filename

The **relative** path to the location of the file, so not a local file!
The file should already exist on the server. For example:

`download.zip`
(when the file is in the same folder)

`./files/download.zip`
(when the file is in a sub folder)

Styling

The extension has styling options to customize background, border, text color, font-family, font-size.

Icon

It's also possible to customize the icon. Most icon libraries that work with WWB's icon object, will also work with the 'Like This' extension. The icon will also be published as SVG to reduce the output size.

Here's how the download button works:

When the button is clicked, it triggers a script that monitors clicks on the page. An AJAX request is then sent to the server, which executes `downloadbutton_getfile.php`. This script verifies the file's existence and updates `downloadbutton_db.txt` to increase the download count for the requested file. Finally, the file is sent to the browser so that it can be downloaded.

Once the file has been downloaded, the script updates the text (counter) on the button to reflect the increased number of downloads.

How to install this extension so it is available in WYSIWYG Web Builder?

You can use the Extension Manager (Menu->Tools->Extension Manager) to install this extension.

Alternatively, you can manually copy all files from the zip file to the Web Builder extensions folder. Usually this folder is in this location:

My Documents\WYSIWYG Web Builder\system\extensions\

Requirements

WYSIWYG Web Builder 16 or higher

PHP 7 or newer
