

Folder File Listing

This extension for WYSIWYG Web Builder displays a list of files and folders for a specific folder on the web server, inspired by the look of the Windows file explorer. Clicking one of the icons will go into the next level. The 'Back' button can be used to go back to the previous level. This can be useful, if you have a folder on your web site with PDF or MP3 files then this extension will automatically scan this folder and display the contents on your web page as links in a folder-like format, so users can download these files.

Note that you must publish the page to view the results, because the extension uses PHP which only works on a web server.

General Properties

Folder to scan

Specifies the folder on the web server to scan for the specified file types.

Use `\.` to scan the current folder.

Make sure the folder exists on the web server!

File types

File types to show. Use a comma to separate multiple files types.

For example: ***jpg, mp3, pdf***

Link Target

Link target controls where the file will be displayed when the user follows a link. Most of the time, clicking on a link simply loads in the same window where the link was.

However, with Link Target, you can have the new document open in a new window, or if you are using frames, in another frame.

Examples:

`_blank`: opens the link in a new window

`_self`: open the link in the current frame

`_parent`: open the link in the parent frame

`_top`: loads the linked document in the topmost frame

Style Properties

Set style properties, like font family, size, colors, padding, icons etc.

Responsive Properties

The font-size, padding, margin, icon size and number of columns are responsive, which means that they can have a different value in breakpoints.

How to install this extension so it is available in WYSIWYG Web Builder?

You can use the Extension Manager (Menu->Tools->Extension Manager) to install this extension.

Alternatively, you can manually copy all files from the zip file to the Web Builder extensions folder. Usually this folder is in this location:

My Documents\WYSIWYG Web Builder\system\extensions\

Requirements

WYSIWYG Web Builder 16 or higher
