

# Slim Bar Player

This extension for WYSIWYG Web Builder implements a compact, fixed-bottom audio player with an edge-to-edge progress indicator, centered transport control, volume control, floating current-track badge and popup playlist. Tracks, colors, typography, icons, dimensions, responsive values and shadow styling can be configured.

Demo:

<https://wysiwygwebbuilder.com/support/demos/slimbarplayer.html>

## Tracks

The Tracks page defines the playlist and playback order. Each row stores one audio source and the title and artist text shown in the playlist and current-track badge.

### Playlist commands

**Add:** Opens the Add Media dialog and appends a new track to the playlist.

**Edit:** Opens the selected track so its source, title and artist can be changed.

**Remove:** Deletes the selected track from the playlist.

**Remove All:** Clears every track from the playlist.

**Move Up:** Moves the selected track one position earlier in the playback order.

**Move Down:** Moves the selected track one position later in the playback order.

### Track properties

**Filename:** Selects the audio source. Local files are copied when the page is published; absolute browser-compatible audio URLs may also be used.

**Title:** Sets the track title displayed in the playlist and floating current-track badge.

**Artist:** Sets the artist name displayed after the title. When both values are present, the player separates them with a dash.

## Settings

The Settings page controls the dimensions and appearance of the fixed player, progress indicator, playlist, icons and shadow. Numeric dimensions are entered in pixels unless stated otherwise.

### General

**Font name:** Selects the font family used by the player, time values, current-track badge and playlist.

**Font size:** Sets the base interface size in points. This value can be stored separately at Web Builder breakpoints.

**Height:** Sets the height of the fixed player bar. This value can be stored separately at Web Builder breakpoints.

**Auto-play next track:** Automatically loads and starts the next configured track when playback ends. After the final track, playback continues from the first track.

**Border radius:** Sets the upper corner radius of the floating current-track badge and popup playlist.

**Padding:** Sets the horizontal spacing inside the fixed player bar. This value can be stored separately at Web Builder breakpoints.

**Progress height:** Sets the height of the edge-to-edge progress bar at the top of the player. This value can be stored separately at Web Builder breakpoints.

### Colors

**Main Background:** Sets the background color of the fixed player, current-track badge and popup playlist.

**Main Text/Icon:** Sets the text and SVG icon color throughout the player and playlist.

**Progress Bar BG:** Sets the unfilled background color of the progress bar.

**Progress Loaded:** Sets the color that indicates the buffered portion of the audio.

**Progress Active:** Sets the color of the elapsed playback portion and the active playlist item.

**Volume Active:** Sets the filled portion of the volume bar.

### Icons

**Icon font:** Selects the installed icon library used to choose the controls. The selected icons are exported as inline SVG in the published page.

**Icon size:** Sets the size of the playlist, transport, volume and playlist-row icons. This value can be stored separately at Web Builder breakpoints.

**Play icon:** Selects the icon displayed while the current track is paused.

**Pause icon:** Selects the icon displayed while the current track is playing.

**Playlist icon:** Selects the icon that opens or closes the playlist.

**Volume icon:** Selects the icon used to mute or restore the audio volume.

### Box Shadow

**Shadow:** Sets the color of the shadow around the fixed bar, current-track badge and playlist.

**Opacity:** Sets shadow opacity from 0 (transparent) to 255 (opaque). Use 0 to disable the visible shadow.

**Offset x:** Sets the horizontal distance of the shadow. Negative values move it to the left.

**Offset y:** Sets the vertical distance of the shadow. Negative values move it upward.

**Blur:** Sets the softness and reach of the shadow. Larger values create a wider, softer effect.

## Playback and playlist behavior

Play/Pause starts or pauses the selected track. Clicking the progress bar seeks to the corresponding position, while clicking the volume bar changes the audio level. The volume icon mutes playback and restores the previous level. Selecting a different playlist item loads it from the beginning and starts playback; selecting the active item toggles play and pause.

The playlist button opens the popup playlist above the bar, and its close control hides it again. The current time, total duration, played progress and buffered progress are updated from the browser audio element.

## Responsive properties

The extension stores breakpoint-specific values for Font size, Padding, Icon size, Height and Progress height. These values generate CSS for the corresponding player elements at each Web Builder breakpoint. Colors, icon choices, Auto-play next track, Border radius and shadow settings remain shared.

## Fixed positioning

Slim Bar Player is fixed to the bottom of the browser window and spans the available viewport width, regardless of the extension object's position in the page layout. The current-track badge and playlist open upward. Leave sufficient bottom space when important page content could otherwise be covered by the player.

## How to install this extension so it is available in WYSIWYG Web Builder?

You can use the Extension Manager (Menu->Tools->Extension Manager) to install this extension.

Alternatively, you can manually copy all files from the zip file to the Web Builder extensions folder. Usually, this folder is in this location:  
My Documents\WYSIWYG Web Builder\system\extensions\

## Requirements

WYSIWYG Web Builder 18 or higher
